

NControl Security Integrations introduces **Keg Track**.

The system uses the latest RFID technology monitor the location of all Kegs in the facility and whether the Kegs is filled (and with what product) or empty.

The system is ideal for:

- Micro-Breweries
- Vineyards

Keg Track can automate your operation and help control inventory levels monitoring activity and displaying inventory on hand. Additionally, the system keeps track of expiration dates so you know what to send out first.

### System Functions

- Records and displays Keg locations and movement history
- Know product levels to determine production needs
- Locate Kegs by knowing where each Keg is shipped to
- Shows the Real-time location of all RFID tags
- Ensure that all product shipped is fresh

## NEAT Keg Track Monitor and Control Brewery Inventory

NControl is pleased to offer a new concept in brewery control, **NEAT's Keg Track**.

**Keg Track** is a cost-effective solution to monitor and control brewery inventory. The system uses NControl's **NEAT** software and the latest RFID hardware to monitor the location of all Kegs in the facility and whether the Kegs is filled (and with what product) or empty.

The system also has the ability to input information when Kegs are filled to indicate what product was used and the expiration date of the contents. The system can also be used to indicate where the Keg was shipped to. Know instantly inventory levels - control product distribution - ensure that the right product is available when needed - prevent waste by monitoring the expiration date of product.

**Keg Track** is designed as a two part system. The first monitors receiving doors and filling station areas. When a Keg nears these areas, personnel input information to define product and distribution information, allowing personnel to know what product is completed and where it is going. The system stores the Keg contents, when it was filled and the expiration date of the contents.

The second part tracks Kegs while in the facility including empty Kegs, Kegs Filled Awaiting Shipped and Shipped Kegs. This allows users to know where your inventory is instantly, exactly what is on hand and the expiration date of the contents. Using Keg Track will ensure fresh product is distributed and prevent losses from expired products.

**Keg Track** options include:

**Tag Joining** – The system can be configured where employees can be associated with keg activity include filling and distribution of products. Employees where RFID badges and are joined to activity when seen with keg.

**Visitor Tracking** – The Visitor Service uses the RFID tracking hardware already installed to monitor visitors as they move around your facility. Use the system to check in/out visitors, designate responsible party and expected time in the facility. Account for all visitors in an emergency.
