Design Documents

Usage Manual

HIGHLIGHTS

- Display vehicle location and movement in real-time
- Records information on all events including information from integrated systems
- Reports that shows historic information on asset movement
- Add controls to standard Tracking software
- Use defined events to trigger actions
- Automate functions
- Control access and departures
- Save time and Money

NVTS offers dealers a level of inventory control never available before. The system uses our new software along with the latest Radio Frequency technology to track inventory in real-time and compiles the information in a user-friendly format that is ideal for the automotive industry.

The system, that is designed to run seamlessly in the background, gives the dealer complete control of their inventory. With this control the dealer will never have to worry about where their inventory is and can focus on other areas of their operation

NVTS makes its information available via a constantly updated web-based reporting system. Users can find vehicle locations easily; have access to historic information on vehicle movement, and other standard reports.

With **NVTS** dealers can not only track inventory, but help you sell more cars. **NVTS** monitors the vehicles at all your locations and combines all vehicles onto a single Tracking Report. Using this report, salespeople can view the vehicles in the entire dealer-group that satisfies their customer requirements. Don't sell from just one location – sell from all of them!

Use **NVTS** to:

- Sell More Cars
- Keep Your Customers
- Instant Inventory Access
- Theft Protection
- Total Inventory Control
- Make More Money

Managers can use the system to monitor inventory levels, determine order requirements, and adjust inventory levels at all locations to ensure the correct vehicles are at the right location.

There are a number of features available that can enhance the functionality of **NVTS**. These features include:

The ability to control your inventory – using NControl's Parent/Child subsystem and the NGate device, the system can control security gates at you location. **NVTS** can be designed so that a salesman is required to be in a vehicle before it leaves your lot. This ensures that dealership personnel are in all vehicles when they leave the lot.

A way to prevent theft – using NControl's NEAT Alarm Service, **NVTS** can notify designated personnel when a vehicle leaves the facility after hours via text message or email. Know what is happening at your facility – even when you're not there.

For additional information on **NVTS** please contact **NControl Security Integrations, LLC** at either sales@ncontrolsi.com or via telephone at (219) 285-0141.
